

RECYCLING ALUMINUM CANS IS GOOD BUSINESS FOR FLORIDA

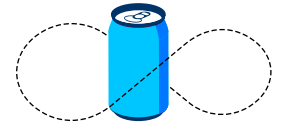

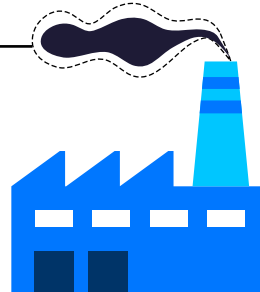

ALUMINUM CANS ARE A TRULY SUSTAINABLE PRODUCT

Recycled aluminum uses **92% less energy** than virgin

A **10% increase** in recycled content decreases greenhouse gas (GHG) emissions **by 15%**

Unlike most other packaging materials aluminum is **infinitely recyclable**

TODAY, **FLORIDA RECYCLES 25% OF ALUMINUM CANS.*** INCREASING THE RECYCLING RATE TO **90%** WOULD OFFER SIGNIFICANT ECONOMIC, SOCIAL, AND CLIMATE BENEFITS:

ECONOMIC & SOCIAL BENEFITS

Generate **\$151.8 million** for Florida's economy through material sales

Contribute **9,400 jobs** in collection, sorting, and reprocessing to Florida's economy

Raise wages in related industries in Florida from **\$127.8 million to \$450.1 million**

CLIMATE BENEFITS

Keep **119,700 tons of materials** out of the landfill each year

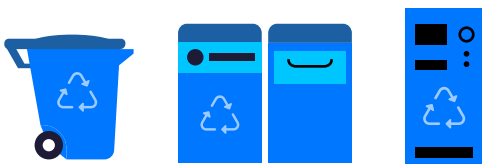

Save enough energy to power **132,000 homes** for a year

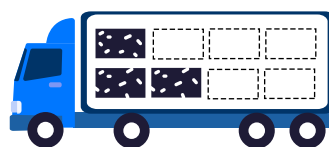

Avoid **1.1 million MTCO2e** of GHG emissions annually — equivalent to taking **237,000 cars** off the road for a year

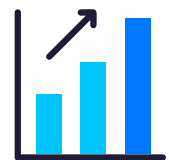

MORE ALUMINUM CANS RECYCLED = LESS RELIANCE ON IMPORTS OF RECYCLED MATERIAL

If more cans are recycled...

we could rely less on primary aluminum imports...

and increase recycled content **beyond 73%**.

*Recycling rates reflect material losses during collection and sorting. Recycling metrics are from the 50 States of Recycling report.
