

RECYCLING ALUMINUM CANS IS GOOD BUSINESS FOR LOUISIANA

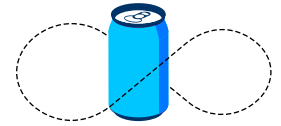

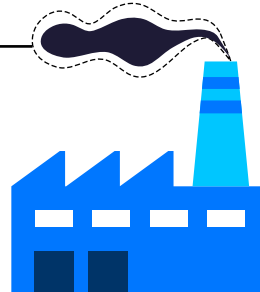

ALUMINUM CANS ARE A TRULY SUSTAINABLE PRODUCT

Recycled aluminum uses **92% less energy** than virgin

A **10% increase** in recycled content decreases greenhouse gas (GHG) emissions **by 15%**

Unlike most other packaging materials aluminum is **infinitely recyclable**

TODAY, **LOUISIANA RECYCLES 11% OF ALUMINUM CANS.*** INCREASING THE RECYCLING RATE TO **90%** WOULD OFFER SIGNIFICANT ECONOMIC, SOCIAL, AND CLIMATE BENEFITS:

ECONOMIC & SOCIAL BENEFITS

Generate **\$21.9 million** for Louisiana's economy through material sales

Contribute **1,400 jobs** in collection, sorting, and reprocessing to Louisiana's economy

Raise wages in related industries in Louisiana from **\$8.6 million to \$64.7 million**

CLIMATE BENEFITS

Keep **17,300 tons of materials** out of the landfill each year

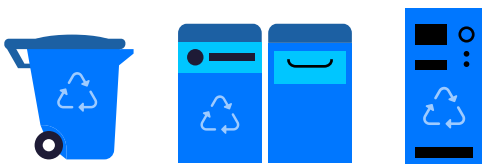

Save enough energy to power **19,000 homes** for a year

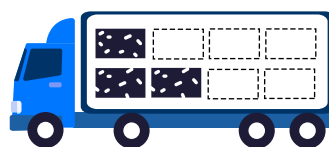

Avoid **157,800 MTCO2e** of GHG emissions annually — equivalent to taking **34,000 cars** off the road for a year

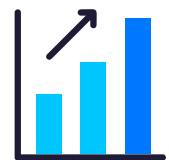

MORE ALUMINUM CANS RECYCLED = LESS RELIANCE ON IMPORTS OF RECYCLED MATERIAL

If more cans are recycled...

we could rely less on primary aluminum imports...

and increase recycled content **beyond 73%**.

*Recycling rates reflect material losses during collection and sorting. Recycling metrics are from the 50 States of Recycling report.
