

RECYCLING ALUMINUM CANS IS GOOD BUSINESS FOR MISSISSIPPI

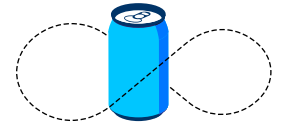

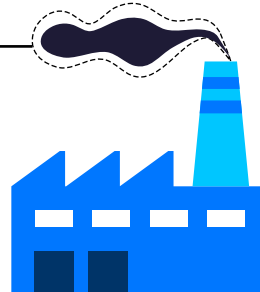

ALUMINUM CANS ARE A TRULY SUSTAINABLE PRODUCT

Recycled aluminum uses **92% less energy** than virgin

A **10% increase** in recycled content decreases greenhouse gas (GHG) emissions **by 15%**

Unlike most other packaging materials aluminum is **infinitely recyclable**

TODAY, **MISSISSIPPI RECYCLES 12% OF ALUMINUM CANS.*** INCREASING THE RECYCLING RATE TO **90%** WOULD OFFER SIGNIFICANT ECONOMIC, SOCIAL, AND CLIMATE BENEFITS:

ECONOMIC & SOCIAL BENEFITS

Generate **\$14 million** for Mississippi's economy through material sales

Contribute **860 jobs** in collection, sorting, and reprocessing to Mississippi's economy

Raise wages in related industries in Mississippi from **\$6.1 million to \$41.1 million**

CLIMATE BENEFITS

Keep **11,100 tons of materials** out of the landfill each year

Save enough energy to power **12,000 homes** for a year

Avoid **100,900 MTCO2e** of GHG emissions annually — equivalent to taking **22,000 cars** off the road for a year

MORE ALUMINUM CANS RECYCLED = LESS RELIANCE ON IMPORTS OF RECYCLED MATERIAL

If more cans are recycled...

we could rely less on primary aluminum imports...

and increase recycled content **beyond 73%**.

*Recycling rates reflect material losses during collection and sorting. Recycling metrics are from the 50 States of Recycling report.
