

# RECYCLING ALUMINUM CANS IS GOOD BUSINESS FOR MISSOURI

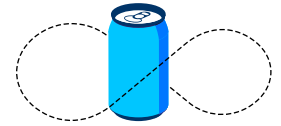

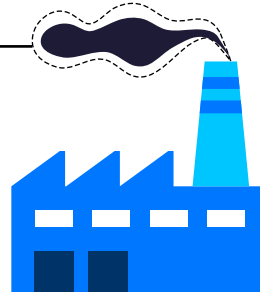

## ALUMINUM CANS ARE A TRULY SUSTAINABLE PRODUCT

Recycled aluminum uses **92% less energy** than virgin

A **10% increase** in recycled content decreases greenhouse gas (GHG) emissions **by 15%**

Unlike most other packaging materials aluminum is **infinitely recyclable**

TODAY, **MISSOURI RECYCLES 18% OF ALUMINUM CANS.\*** INCREASING THE RECYCLING RATE TO **90%** WOULD OFFER SIGNIFICANT ECONOMIC, SOCIAL, AND CLIMATE BENEFITS:

### ECONOMIC & SOCIAL BENEFITS

Generate **\$29.9 million** for Missouri's economy through material sales

Contribute **1,900 jobs** in collection, sorting, and reprocessing to Missouri's economy

Raise wages in related industries in Missouri from **\$19.1 million to \$89.1 million**

### CLIMATE BENEFITS

Keep **23,700 tons of materials** out of the landfill each year

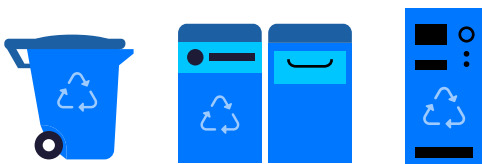

Save enough energy to power **26,000 homes** for a year

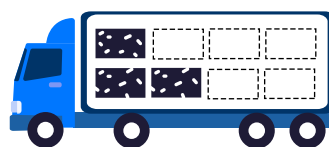

Avoid **215,800 MTCO<sub>2e</sub>** of GHG emissions annually — equivalent to taking **47,000 cars** off the road for a year

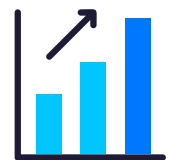

## MORE ALUMINUM CANS RECYCLED = LESS RELIANCE ON IMPORTS OF RECYCLED MATERIAL

If more cans are recycled...

we could rely less on primary aluminum imports...

and increase recycled content **beyond 73%**.

\*Recycling rates reflect material losses during collection and sorting. Recycling metrics are from the 50 States of Recycling report.
