

RECYCLING ALUMINUM CANS IS GOOD BUSINESS FOR NEW YORK

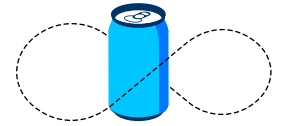

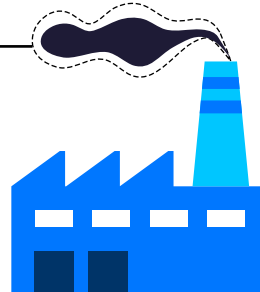

ALUMINUM CANS ARE A TRULY SUSTAINABLE PRODUCT

Recycled aluminum uses **92% less energy** than virgin

A **10% increase** in recycled content decreases greenhouse gas (GHG) emissions **by 15%**

Unlike most other packaging materials aluminum is **infinitely recyclable**

TODAY, **NEW YORK** RECYCLES **64%** OF ALUMINUM CANS.* INCREASING THE RECYCLING RATE TO **90%** WOULD OFFER SIGNIFICANT ECONOMIC, SOCIAL, AND CLIMATE BENEFITS:

ECONOMIC & SOCIAL BENEFITS

Generate **\$92.9 million** for New York's economy through material sales

Contribute **5,800 jobs** in collection, sorting, and reprocessing to New York's economy

Raise wages in related industries in New York from **\$202.8 million to \$281.6 million**

CLIMATE BENEFITS

Keep **73,400 tons of materials** out of the landfill each year

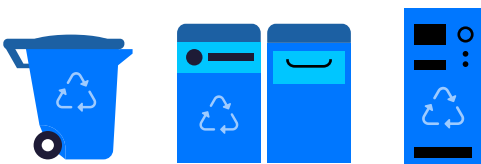

Save enough energy to power **81,000 homes** for a year

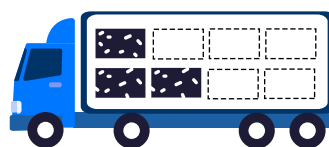

Avoid **669,800 MTCO_{2e}** of GHG emissions annually — equivalent to taking **146,000 cars** off the road for a year

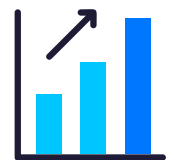

MORE ALUMINUM CANS RECYCLED = LESS RELIANCE ON IMPORTS OF RECYCLED MATERIAL

If more cans are recycled...

we could rely less on primary aluminum imports...

and increase recycled content **beyond 73%**.

*Recycling rates reflect material losses during collection and sorting. Recycling metrics are from the 50 States of Recycling report.
